Malaysia

Country/Region	General measures	Measures for construction
MALAYSIA		
Economic outlook	<p>According to data from the World Bank, when focusing on South and Southeast Asia the economic activity is forecast to contract by 1.2% in 2020 before rebounding to 5.4% growth in 2021. Among the major economies of the region, Malaysia, the Philippines, and Thailand are forecast to experience the biggest contractions in 2020 (June 2020).</p> <p>According to MEDEF, economic safety packages were put in place in the Southeast Asia region, with Malaysia implementing one of the most important rescue packages in the region amounting 16% of GDP.</p>	<p>The Malaysian construction industry has been severely affected due to the disruption caused by the Covid-19 pandemic. GlobalData estimates that the industry's output shrank by 17.2% in 2020, as construction activity was brought to a standstill across many parts of the country, owing to the impact of Covid-19 related containment measures.</p> <p>According to the Department of Statistics Malaysia (DOSM), the country's value-add at 2015 constant prices fell by 21.3% year on year (YoY) in the first three quarters of 2020. During this period, civil engineering works were the most affected, followed by non-residential and residential activities (cf. GlobalData) (January 2021).</p>
Recovery	<p>The industry is expected to post a sharp recovery in 2021, assuming that there is no repeat of the containment measures that were in place in 2020, with growth supported by investments in transportation and energy projects. The industry is expected to grow by 9.8% in 2021 and register annual growth in the range of 6.0-6.6% between 2022 and 2025. In mid-December 2020, the government approved a 2021 budget worth MYR322.5 billion (US\$73.3 billion), which is the largest in the country's history, and is 2.4% higher than last year's budget of MYR314.7 billion (US\$76 billion). Of the total budget, 73.3% is allocated towards operational expenditure, 21.4% towards development expenditure and the remaining 5.3% towards dealing with Covid-19.</p> <p>The industry's growth will be supported by a recovery in economic conditions, coupled with investments in infrastructure, renewable energy, and residential, telecommunications and water infrastructure projects. As a part of the 2021 budget, the government allocated a total of MYR9.6 billion (US\$2.2 billion) to the state governments of Sabah and Sarawak to upgrade road, power, and water infrastructure projects, as well as to improve</p>

	health and education facilities. Forecast-period growth will also be driven by the government's target to produce 20% of its energy from renewable energy sources by 2025, and its target of building one million housing units for low-income earners by the end of 2029 (cf. GlobalData) (January 2021).
